Form Approved
OMB No. 0704-0188

The public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing the burden, to Department of Defense, Washington Headquarters Services, Directorate for Information Operations and Reports (0704-0188), 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS.

LONG-TERM GOALS

The long-term goals for the Scripps Institution of Oceanography Geological Collections, have been and continue to be, to serve the scientific community by acquisition, maintenance, conservation and curation of marine geological samples; to make the scientific community aware of our holdings; to encourage utilization of the collection for scientific study and science educational purposes; to develop consistent policies and procedures through active cooperation with work other marine geological repositories; and to support related activities at SIO and the scientific community at large.

OBJECTIVES

During the tenure of this award our objectives were to:

- (1) Develop and maintain adequate space to accommodate materials in the existing collections, and anticipated new acquisitions, under conditions that will properly archive them, minimize their deterioration, and maximize their scientific usability. An immediate need was to expand the refrigerated core-storage facility to accommodate soon-to-arrive core samples and make plans that would ultimately enable us to develop an integrated facility combining collections from other sources (e.g. other UCSD campuses, and institutions in other states, e.g. Oregon and Florida).
- (2) Collect, archive and disseminate data in readily accessible formats that would encourage utilization of samples for scientific research and educational purposes. This required digitization (for upload onto the Internet) of all pertinent sample data--a large volume of which required conversion from original hard-copy formats.
- (3) Establish and update a comprehensive sample inventory database that is easily searchable on the web for in-office, as well as for use by principal investigators and graduate-student researchers.

(4) Review sample requests, assist researchers in sample selection and distribute sample material to qualified scientists for study in such fields as ocean history, paleo-climatology, deep sea and near-shore geological processes, microfossil evolution, origin of mineral deposits, petrologic and geochemical studies, and tectonic processes.)

(5) Meet with curators of other marine geological collections to promote cooperation, idea and information exchange, reduce redundancy of efforts, and seek means to solve mutual problems.

(6) Conduct out-reach educational activities for the general public to stimulate creative thinking and encourage interest and appreciation of the geological sciences..

(7) Develop a long-range plan for expansion that would include a larger, integrated, full-service laboratory and educational facility.

APPROACH

The Geological Collections has and will continue to provide invaluable material to a wide spectrum of investigators working on all aspects of marine geology. The direction and scope of the purely curatorial tasks has remained much the same as in the past. Each year the SIO Geological Collections has acquired new research and teaching material from recently retired principal investigators at SIO. These are archived along with the broader general collection.

In addition to maintaining present staff positions, the Collections Facility has hired undergraduate students to assist with many curatorial tasks including inventory, bibliography updates, conversion of hard copy to digital format. This provided cost-effective help that also allowed students to gain experience in core and rock handling curatorial techniques, knowledge of geological principles, and hands on experience with material of the earth's crust.

WORK COMPLETED

Sample Acquisition, Distribution and Utilization -We continue to receive additions to the collections in the form of gravity and piston cores, dredge hauls, hand samples, washed residues, prepared slides, and other related samples. During the past year we acquired 176 additional samples from offshore Central California (Eel River) and the Jasper Seamount (Baja California borderlands). A compilation of material acquired and archived during tenure of the award is attached.

We filled requests for 3232 samples for SIO researchers, 3089 samples for non-SIO researchers, and 554 for outreach educational activities. The various research projects were directed to paleoclimate studies, studies on near-shore sedimentation and tectonics, extraterrestrial impacts, studies on radiolaria, and petrology and geochemistry of rocks from ocean trenches, island arcs, seamounts, and mid-ocean ridges. A list of distributed material is attached as an appendix.

In addition, we hosted educational tours and briefings involving a total of 2400 visitors and distributed samples to teachers and students for hands-on classroom work. (*Note* - the samples distributed for outreach teaching purposes are from very large "bulk" materials or material unsuitable for scientific research owing to incomplete data or possible contamination.)

Our geological collections currently comprise more than 7000 cores, rocks from about 4000 dredge hauls, nearly 600 grab samples, and more than 1000 square feet of special collections (in drawers, cabinets and shelves).

Research papers published (60) that made use of samples distributed are on an attached list

NGDC Data -We sent underway and descriptive data to the National Geophysical Data Center (NGDC) in Boulder, Colorado for inclusion in the Curators' Database for 27 samples from four expeditions.

Special -Collection Inventories – Our Special Collections represent material acquired by individual researchers and donated to the SIO Geological Collections. Many samples (such as the samples used for pioneer research on Helium isotope systematics by the late Dr. Harmon Craig) contain irreplaceable scientifically significant materials including type specimens, samples from type localities or samples for which study led to development of key geological concepts and theories. We are continuing to make an inventory of these collections, digitize information about the collections, and the samples and otherwise ensure their preservation, conservation and future utilization. When archiving is completed, the material in these collections will be made available to qualified users for further research

WEB-SITE DEVELOPMENT

Public outreach has been an increasingly important priority for the Geological Collections. Our staff, in conjunction with other SIO groups, put a public web site on line in April 2003. Geological Collections further upgraded its site with a searchable bibliography containing more than 1800 citations for publications based entirely, or in part, on study of materials from the SIO Geological Collections. Data for the recently acquired Riedel/Sanfilippo Radiolarian Collection (comprising more than 23,000 sample records) has been converted to a searchable on-line file and will be linked to the collections sites soon. An on-line sample request form is also available to researchers who wish to request samples for research or teaching.

The Geological Collections Staff has also upgraded "flat" (non-searchable) files to aid scientists and the general public in gaining information about holdings and operations of the SIO Geological Collections. This includes data related to expeditions on which samples were collected, core and dredge sample data, inventories of "Special Collections", procedures for describing cores, and illustrated guides to recognizing fossil and mineral components in smear slides.

To view SIO Collections sites go to <http://collections.ucsd.edu/cs/>

RESULTS

The SIO Geological Collections is a service organization dedicated primarily to assisting other marine geologists in the pursuit of their research objectives. There is no plan at this time to engage in first-hand technical studies.

IMPACT/APPLICATIONS

Our impact on science has been in supporting studies in a broad range of disciplines with the ultimate goal of understanding the geologic history of the earth. Our samples include rocks of the ocean crust that indirectly give insight to the earth's upper mantle. The oceanic sediments record information about evolution of marine organisms, paleo-climate and paleo-oceanography as well as to give insight to the nature of continental crust and the mutual interactions of hydrosphere, atmosphere, and lithosphere. Historically, the study of materials in the SIO Collections have produced innovative concepts and opened whole new fields of scientific endeavor. Some examples are William R. Riedel's work that established the field of radiolarian biostratigraphy, Wolfgang Berger's work in reconstructing Pleistocene temperatures on the basis of oxygen isotopes in foraminifer tests, and calcite compensation depths on the basis of foraminifer-test dissolution, Francis Shepard's pioneering work on near-shore geological processes, Robert L. Fisher's pioneer explorations of the geology of ocean trenches, Al and Celeste Engel's fundamental contributions on the petrology of crust formed at ocean ridges, and Harmon Craig's studies on Helium isotopes and their significance to oceanic magma sources.

Other recent studies are noted in PUBLICATIONS below.

TRANSITIONS

Others utilize our samples, collective knowledge, facilities, equipment, and data archives (both hard copy, digitized and Internet accessible) to further educational goals or research goals. Archived scientific collections are used and needed to test reproducibility of previous studies and to conduct original studies testing new hypotheses. An important aspect of this effort is to save "type" material for future study utilizing new ideas, tools, and technology.

Our collections also provides a managed repository in which retiring scientists can place their research collections with the knowledge that they will be accessible to others for research in the future.

Although most of our collections were derived from SIO expeditions, and/or from SIO researchers, we have curated certain related collections from other sources, for example those from the Navo9802 (CRNR02) expedition that collected samples for the Navy's Shallow Water Training Range Technology Development program.

Some specific services include core splitting, core photography, preparation of sediment descriptions in support of specific projects.

RELATED PROJECTS

We maintain a close link with NOAA's **National Geophysical Data Center (NGDC)** in Boulder, providing core and dredge sample data for the Curators' Data Base, a searchable, comprehensive database incorporating data for marine and lake environments from twenty major U. S. institutions and government agencies. The database, comprising data for over 100,000 samples, may be accessed at

<http://www.ngdc.noaa.gov/mgg/curator/curator.html>

We actively participate in **The Curators Of Geological Samples Group**, an informal body created to provide scientific advice to NGDC as regards development and maintenance of the Curators' Database, to exchange ideas about collections management and provide a coactive environment in which to advance curatorial activities. See <http://www.ngdc.noaa.gov/mgg/curator/oct98minutes.html> .

The **SIO Geological Data Center** and the Geological Collections are engaged in discussions to utilize underway and digitized Collections data in conjunction with the National Science, Technology Engineering and Educational Digital Library (NSDL), an effort to create a national on-line network of "learning environments and resources.

The SIO Geological Collections contributes to the efforts of the **SIO Stephen Birch Aquarium** in providing specimens, offering ideas, and teachers visited the facility.

We also work closely with the **SIO Directors Office** and other SIO/UCSD groups in promoting awareness and appreciation of the geosciences and contributing to educational outreach programs.

The following pages summarize Geological Collections staff activities and contributions to the research community and to community outreach education.
